

A Tallysman Accutenna® TW2743 Magnet Mount Passive Iridium® / Active GNSS Antenna

The TW2743 employs Tallysman's unique *Accutenna* technology in a magnet mount, right hand circularly polarized antenna for the reception of all of the GNSS constellations (GPS L1/GLONASS G1/ Galileo E1/ BeiDou B1) plus Iridium: 1559 to 1626.5 MHz frequency band. It is specially designed to maximize the performance of Iridium™ Voice and Data Modems plus the upper GNSS band (1559 - 1606MHz)

The TW2743 is switchable between the passive Iridium and the active GNSS antenna by changing the input voltage to the antenna. When the input voltage is less than 5.5VDC, the antenna will engage the GNSS antenna. To invoke the passive Iridium antenna, an input voltage above 5.5VDC is required.

The TW2743 features a high performance dual-feed patch element that provides great axial ratio (4.5dB max, <1.5dB @ zenith) over the entire Iridium™ + upper GNSS frequency band, thus signals at the band edges remain truly circular, unlike the response of single feed antennas.

The TW2743 is housed in a compact, industrial-grade weather-proof, magnet mount enclosure, with threaded base holes for screw down attachment.
