

# Ethene, Ethylene Gas Sensor C2H4/C-10

C2H4 Gas Sensor in Compact Housing

### **Applications**

- Discontinuous Measurement
- Fruit Ripening

### **Measurement**

| Operation Principle                        | 3-Electrode Electrochemical |
|--|-----------------------------|
| Nominal Range                              | 0 - 10 ppm                  |
| Maximum Overload                           | 20 ppm                      |

# **Temperature dependence**

The output of an electrochemical sensor varies with temperature. The graphs below show the temperature-dependent variation of baseline and sensitivity, respectively. The results shown here are raw data (batch average) without any post-processing steps. The sensitivity and baseline are referenced to the signal at 20°C (reference point).

Please note: It is highly recommended to acquire the temperature dependence curves with the whole instrument. The sampling system, the humidity, the electronics and the interaction between the electronics and the sensor have a significant impact on the temperature dependence of the final measurement reading.

Baseline shifted with respect to reference point at 20°C.
