The patent-pending VSE6028 antenna employs Tallysman's unique VeroStar ${ }^{\text {TM }}$ technology, providing high gain over the full GNSS spectrum: GPS/QZSS-L1/L2/L5, QZSS-L6, GLONASS-G1/G2/G3, Galileo-E1/E5a/E5b/E6, BeiDou-B1/B2/B2a/B3, and NavIC-L5, including the satellite-based augmentation system (SBAS) available in the region of operation [WAAS (North America), EGNOS (Europe), MSAS (Japan), or GAGAN (India)].

The light and compact embedded VeroStar ${ }^{\text {TM }}$ VSE6028 is designed and crafted for highaccuracy positioning while being robust and reliable.

With an exceptionally low roll-off from zenith to the horizon, the VeroStar ${ }^{\text {TM }}$ antenna provides the best-in-class tracking of GNSS signals from low elevation angles. In addition, the optimized axial ratio at all elevation angles results in excellent multipath rejection, thus enabling accurate and precise code and phase tracking of GNSS signals.

A wide-band spherical antenna element enables the VeroStarm ${ }^{T M}$ to deliver a $\pm 2 \mathrm{~mm}$ phase centre variation (PCV), making it ideal for high-precision applications, such as autonomous vehicle navigation (land, sea, and air), smart survey devices, and maritime positioning.

The VeroStar ${ }^{T M}$ antenna features a robust pre-filter and high-IP3 LNA architecture, minimizing de-sensing from high-level out-of-band signals, including 700 MHz LTE, while still providing a noise figure of only 1.8 dB .

The embedded VeroStar ${ }^{\text {TM }}$ antenna has passed shock and vibration tests to ensure it can survive the rigours of day-to-day field use.

The unique features of the VeroStar ${ }^{T M}$ antenna guarantee it can deliver high signal-tonoise ratio (SNR) and highly accurate and precise code and phase tracking of GNSS signals from all elevation angles in the most challenging environments.

## Applications

- High-precision GNSS systems
- All embedded precision applications, such as:
- Autonomous vehicle navigation (land, sea, air)
- Deformation monitoring stations
- Land survey rover
- Marine navigation
-RTK/PPP systems
- Reference networks

## Features

- Tight phase centre ariation ( $\pm 2 \mathrm{~mm}$ typ.) - Low axial ratios from zenith to horizon
- Low roll-off from zenith to the horizon - High G/T at low elevation angles - Invariant performance from 3.0 to 16 VDC - Low current ( 50 mA )
- Low noise figure ( 1.8 dB )
- Light, compact, and robust design - REACH and RoHS compliant

## Benefits

- Consistent performance across all frequency bands
- Excellent GNSS tracking from low elevation angles
- Extreme accuracy and precision
- Excellent multipath rejection

About Tallysman: With global headquarters and manufacturing in Ottawa, Canada, Tallysman is a leading manufacturer of high-precision antennas and components for Global Navigation Satellite System (GNSS) applications. Tallysman's mission is to support the needs of a new generation of positioning systems by delivering unprecedented antenna precision at competitive prices. Learn more at www.tallysman.com Revision:
